

Brain Structure, Anorexia Nervosa and Masking in Autism: Seeking Participants!

About the Study

We are inviting **Autistic individuals** to take part in a study investigating the relationship between brain structure, eating disorder (ED) symptoms and masking behaviour.

What Does the Study Involve?

We are asking individuals to undergo an **MRI scan*** of the brain and complete a series of questionnaires, in total lasting about **3 hours**. Scan the **QR code** to complete an online screener for study participation.

Inclusion Criteria

You may be eligible to participate in this study if:

- You are between **18-45 years old**
- You are **Autistic** (clinically diagnosed)
- You have **no history** of trauma affecting the brain
- You have **no contraindication** to MRI
